

Cormant Offers DCIM Deployment Price Guarantee

Cormant often hears from enterprises considering DCIM that they are concerned about the cost, degree of success, and ROI in deploying DCIM. Enterprises generally realize they can't deploy DCIM alone, but worry the cost of using external resources can spiral out of control.

Cormant has developed a unique, two facet guarantee program which fixes deployment cost through a "work until it's right" program and a 30-day software money back guarantee.

What does Cormant Guarantee?

- Delivery of a functional DCIM solution, including the import of all current record sets.
- One easy to understand fixed price based on the agreed scope of work.
- If Cormant misses the deadline, we work until it is right.
- During the first 30 days of use if the software does not meet expectations, uninstall it for a full refund of the software price.

What's Included?

- Cormant-CS DCIM perpetual license.
- One year of support and upgrade assurance.
- On-site training for users and administrators.
- Migration of all existing data center infrastructure records.
- Power and environmental SNMP monitoring.

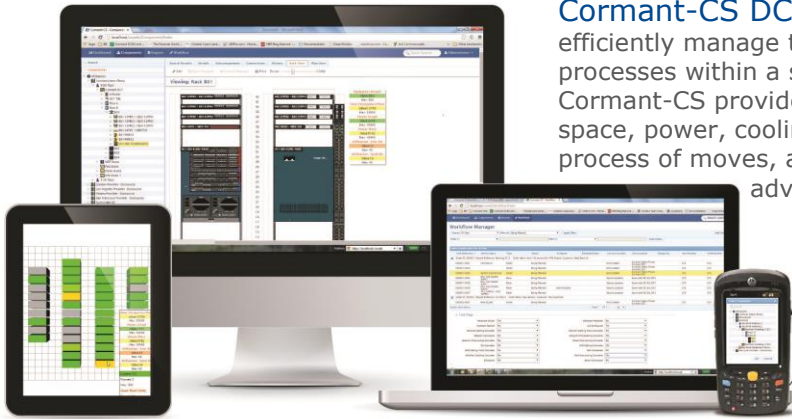

How does the Guarantee Work?

- Meet with a Cormant consultant to understand your environment and assess needs, scope, and size.
- Review your current record set(s) to be imported.
- Receive a clear scope document and project plan, along with a guaranteed price and deployment timeline.
- If Cormant miss the timeline, we work for free until it's right.
- If you are not satisfied with Cormant-CS during the first 30 days uninstall the software for a full refund of the software cost.

Cormant-CS Data Center Infrastructure Management (DCIM)

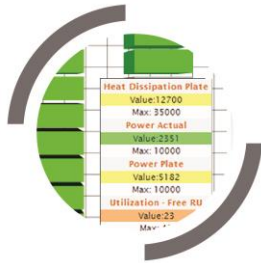

Cormant-CS DCIM empowers data center and IT managers to efficiently manage the IT infrastructure, connections, people, and processes within a single platform. Leveraging accurate data at its core, Cormant-CS provides a single view of all your data to help optimize the space, power, cooling, and capacity of every IT asset and to improve the process of moves, adds, and changes with assistance from Cormant-CS's advanced analytics and what-if scenarios.

Cormant-CS scales with your business while its unique mobility ensures your data remains as accurate on day 1,000 as it was on day 1. Since 2003, we have successfully implemented Cormant-CS for hundreds of customers, including the completion of many integrations with a variety of systems.

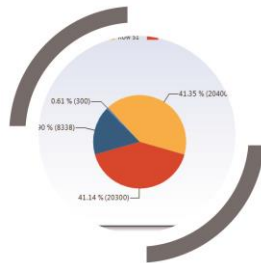

"The system's ease of use and mobility meant we knew we could roll this out to our teams and they would use it. This has proved to be the case and multiple teams now 'self-serve' using the Cormant-CS web."
Mike Alexander, Implementation Manager in Data Center Facility Engineering at McKesson, 2014.

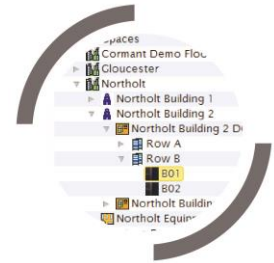

Streamline processes using Workflow to enhance team and resource collaboration and communication. Plan and execute future changes with what-if scenarios, optimal location reports, and by reserving space. See real-time change with the built-in network discovery module.

Optimize IT assets and connections such as power, cooling, connectivity, and overall device resources. Manage alerts from the dashboard with a consolidated view of your top priorities. Link to CMDB data for enterprise visibility.

Improve decision-making with impactful analytics that help you measure, manage, and share trending data with intelligent and configurable alerts, charts, and tables. Charts are also viewable from your configurable dashboard.

Aggregate and maintain data accuracy with dynamic visibility including rack views, plan views, and full channel connections with capacity, trend, efficiency, power, and environmental data. Data remains accurate and scales as your company grows.
