

## Cormant Mobility Makes DCIM Work

Cormant DCIM is known for strong data configuration, change management, analytics, reporting and integration. To deliver reliable, useful information the data at the core of a DCIM must be very accurate. Cormant-CS mobile components ensure that any change is recorded when it happens, ensuring accurate data.

Cormant-CS mobility is included in the core solution and has been since 2003, delivering faster changes and closed loop change management. Mobile platforms provide full security and user authentication as well as data encryption to ensure enterprise data is secure.

### Cormant-CS Mobility is the Foundation of DCIM

- At every stage of DCIM implementation and use, Cormant-CS mobility makes the process faster and the data more accurate, from implementation, through change execution, auditing and problem solving.
- Cormant mobile options are complete create, read, update and delete devices that optionally use barcode and RFID tags for equipment and location identification.
- When equipment is installed, removed or has a problem, data accuracy means Cormant-CS can cycle power and network ports on or off, with the assurance that the correct ports are being used.
- Cormant-CS support the entire life cycle from dock to decommission and full equipment and connection history is available on every mobile device.

### Unique Mobile Options

- Cormant-CS supports both offline and online mobility.
- Offline mobility is ideal for locations with no wireless access to the network or where security rules prohibit the use of wireless. It also ensures no dead-spots exist. Third party devices are used along with integrated barcode and RFID scanners.
- Online mobility is provided on tablets and smartphones. Cormant-CS is unique in supporting the use of the device camera for 1D and 2D barcodes as well as Bluetooth barcode/RFID scanners.
- For either option, any work done is logged and full permission support is provided.

### Mobility Outside the Data Center

Cormant-CS supports many non-data center customers across the world, including universities, cities and the armed forces. Mobility for these customers can extend across a building, campus or a city.

Cormant mobility extends to managing conduits and their contents, vertical and horizontal pathways and intersection points as well as IT equipment of any type in any location.

## Cormant DCIM, Software, Support and Services

### Consultation

You're ready for success with Cormant-CS or are ready for even more. We will help you plan your initial deployment using an in-house methodology to ensure the end-result is exactly what you need. When you are ready to expand we will help you document your new goals and structure a plan to accomplish those goals.

### Implementation

Cormant and our partners offer full initial implementation services, including training your team, working across departments to gather and import data, manage the project, define new processes and manage go-live of Cormant-CS. We can do as much or as little as you need and include guaranteed pricing. Cormant will also help expand your use of Cormant-CS to other sites or new functionality when you are ready. If you prefer, all aspects of Cormant-CS are online for your own implementation efforts.

### Integration

With our advanced API and Cormant-EDIS middleware, we've integrated with many of the leading solutions in the data center. Ask us about our plug-and-play integrations, including: SNMP, XML, IBMS, ServiceNow, Remedy, Niagara, RF Code.

### Site Audits

The true power of Cormant-CS stems from a foundation of accurate data. Both Cormant and our network of partners can update your current data via imports and conduct a full site audit providing an accurate inventory of all your assets.

### Training

We have a full set of training courses available to provide you with knowledge of all aspects of Cormant-CS. Courses include Implementation, Configuration, API, Workflow Design, System Administration, and more. We can get you on the right track to success to get the most out of Cormant-CS.

**Streamline processes**  
using Workflow to enhance team and resource collaboration and communication. Plan and execute future changes with what-if scenarios, optimal location reports, and by reserving space. See real-time change with the built-in network discovery module.

**Optimize IT assets and connections** such as power, cooling, connectivity, and overall device resources. Manage alerts from the dashboard with a consolidated view of your top priorities. Link to CMDB data for enterprise visibility.

**Improve decision-making** with impactful analytics that help you measure, manage, and share trending data with intelligent and configurable alerts, charts, and tables. Charts are also viewable from your configurable dashboard.

**Aggregate and maintain data accuracy** with dynamic visibility including rack views, plan views, and full channel connections with capacity, trend, efficiency, power, and environmental data. Data remains accurate and scales as your company grows.
